Proofreading service for Website Owners

THIS PAGE HAS DELIBERATE ERRORS - CAN YOU SPOT THEM ALL?

Having a presence on the **Internet** means that your business is on display to hundreds of millions of people. Once they have found you, perhaps through a search engine, **you** website is often the first contact potential customers have with your business.

You therefore need to **sure** that your **web site** presents your business to the world in a **professional** manner i.e. attractive, **well formatted** and **absoluteley** error-free using correctly spelt and grammatically correct English.

Anything less will give your website visitors the impression that **your** and your business are unprofessional, perhaps causing them to go elsewhere.

Q: Why can't we just carry out a spelling and **grammer** check of our website using a spellchecker in **out** word processor or web design program?

A: Because spellcheckers have severe limitations and cannot spot words spelt correctly but used wrongly e.g. there or their, hole or whole. Not **convinsed?** Have a look [here](#) and you will be!

Now look at the [proofread version](#) of this page.
